

CLOUDPOINT GEOSPATIAL

Field Safety Guide

Policies, Procedures & Best Practices for Field Personnel

About This Guide

This guide establishes safety requirements and best practices for Cloudpoint Geospatial employees performing field mapping, data collection, surveying support, asset inventory, inspections, and related outdoor work activities. All Cloudpoint field personnel are required to review, understand, and follow the policies contained herein.

All employees have the authority and responsibility to stop work whenever conditions become unsafe. No employee will be disciplined for exercising stop-work authority in good faith.

KEY CONTACTS

Emergency: 911

Cloudpoint Main Office: (877) 377-8124

Supervisor: _____ **Phone:** _____

1. General Field Safety Expectations

Before beginning any field assignment, all Cloudpoint personnel must complete the following pre-field checklist:

PRE-FIELD CHECKLIST

- Review project scope and site-specific hazards
- Verify weather conditions and forecasts for the work area
- Ensure mobile phone or communication device is fully charged
- Carry all required PPE for the assignment
- Inform supervisor of work location and expected return time
- Confirm vehicle is fueled and in safe operating condition
- Review emergency procedures and identify nearest medical facilities

Employees shall never take unnecessary risks to complete a project. If conditions become unsafe at any point, stop work and notify your supervisor immediately.

2. Required Personal Protective Equipment (PPE)

The following minimum PPE is required for all Cloudpoint field assignments. Additional PPE may be required based on project-specific hazards or client site requirements.

PPE Item	Requirement / Notes
High-Visibility Vest	ANSI Class 2 or higher when working near traffic
Safety Glasses	Required at all times in field environments
Closed-Toe Footwear	Sturdy; appropriate for terrain conditions
Weather-Appropriate Clothing	Layers for cold; breathable fabrics for heat
Gloves	When handling equipment or in rough terrain
Hard Hat	When required by site conditions or client requirements

3. Traffic and Roadway Safety

Working near roads presents one of the highest risks to field personnel. All requirements below are mandatory with no exceptions.

Requirements

- Wear high-visibility apparel at all times when working near traffic
- Remain alert to moving vehicles at all times
- Face traffic whenever practical
- Use sidewalks and pedestrian pathways when available
- Maintain a safe buffer from active traffic lanes
- Avoid standing in blind spots, curves, intersections, or high-speed areas
- Use traffic control devices only when trained and authorized
- Never enter active traffic lanes unless specifically authorized and protected by traffic control measures

Parking

- Park in a safe location away from traffic whenever possible
- Activate hazard lights when parked near roadways
- Exit vehicles on the side away from traffic whenever feasible

IF CONDITIONS BECOME UNSAFE

- Stop work immediately
- Relocate to a safe area
- Contact your supervisor before resuming

4. Terrain and Ground Conditions

Field personnel frequently encounter uneven and unpredictable terrain. Common hazards include slips, trips, falls, hidden holes, loose rock, steep slopes, mud, ice, and snow.

Safe Practices

- Watch footing continuously — never assume ground is stable
- Avoid running in field environments
- Test unstable ground before proceeding
- Use extra caution on slopes and embankments
- Maintain three points of contact when climbing
- Avoid working on terrain beyond your physical capability
- Use designated trails and access routes whenever possible

Employees should stop work if terrain conditions present an unreasonable risk and notify their supervisor before proceeding.

5. Weather Safety

Heat

- Stay hydrated throughout the workday
- Take breaks in shaded or cool areas regularly
- Monitor for heat stress symptoms: dizziness, headache, excessive sweating, nausea, confusion
- Notify your supervisor immediately if symptoms develop

Cold

- Dress in appropriate layers for conditions
- Protect hands, feet, and exposed skin
- Monitor for signs of hypothermia and frostbite
- Seek warmth and contact your supervisor if symptoms develop

Lightning

If thunder is heard or lightning is observed:

- Stop field activities immediately
- Seek shelter in a hard-topped vehicle or substantial building
- Do not stand near isolated trees, poles, fences, or metal structures
- Wait at least 30 minutes after the last thunder before resuming work

SUSPEND FIELD WORK IMMEDIATELY DURING:

- Tornado warnings
- Severe thunderstorm warnings
- Flooding conditions
- Extreme wind events

6. Wildlife and Environmental Hazards

Insects

Be alert for ticks, mosquitoes, bees, and wasps. Use insect repellent when appropriate and perform thorough tick checks after all field work.

Snakes and Other Wildlife

- Maintain a safe distance from all wildlife
- Never attempt to handle or approach animals
- Watch where hands and feet are placed — especially in tall grass, brush, and rocky areas
- Report all aggressive wildlife encounters to your supervisor

Poisonous Plants

Watch for and avoid contact with poison ivy, poison oak, and poison sumac. Wash any exposed skin promptly with soap and water if contact occurs.

7. Water Hazards

When working near water bodies, drainage areas, or wet environments:

- Maintain safe distances from shorelines and embankments
- Be aware of slippery surfaces near water
- Do not enter water unless specifically authorized and trained
- Use personal flotation devices when required by project conditions

8. Working Alone (Lone Worker Safety)

Cloudpoint employees working alone must follow additional safety protocols to ensure their wellbeing can be monitored effectively.

LONE WORKER REQUIREMENTS

- Notify your supervisor of your work location before starting
- Establish and follow a check-in schedule agreed upon with your supervisor
- Carry a fully charged communication device at all times
- Report any significant location changes to your supervisor promptly
- Do not enter unsafe areas alone

Work requiring special precautions or presenting elevated risk may require a second employee. Supervisors will communicate these requirements in advance where possible.

9. Utility and Infrastructure Hazards

Remain alert for overhead power lines, electrical equipment, underground utility markers, and active construction activities at all field sites.

NEVER DO THE FOLLOWING UNLESS SPECIFICALLY TRAINED AND AUTHORIZED:

- Enter confined spaces
- Open utility structures or access covers
- Climb utility poles or structures
- Disturb or interfere with utility infrastructure

10. Vehicle Safety

Before Driving — Pre-Trip Inspection

Conduct a visual inspection before every field trip. Verify:

- Tires — no visible damage or low pressure
- Lights — headlights, brake lights, and turn signals functional
- Mirrors — properly adjusted
- Windshield — clean and unobstructed
- Fuel level — adequate for the assignment

While Driving

- Obey all traffic laws at all times
- Do not use handheld devices while driving
- Wear seatbelts at all times — all occupants
- Pull over safely before using phones, tablets, or GPS devices

11. Equipment Safety

Inspect all field equipment before use on every assignment. Equipment to inspect includes GPS units, tablets, cameras, rangefinders, and measuring devices.

- Report damaged or malfunctioning equipment immediately to your supervisor
- Do not use equipment that appears unsafe or produces unexpected results
- Return equipment in the same condition it was issued

12. Incident Reporting

All of the following must be reported to your supervisor immediately, regardless of severity:

REPORTABLE EVENTS

- Injuries — any injury to any person, however minor
- Vehicle accidents — including minor contact or near misses
- Near misses — events that could have caused injury or damage
- Property damage — to company, client, or third-party property
- Unsafe conditions — any hazard identified in the field

Prompt reporting allows hazards to be corrected and prevents additional incidents. There is no penalty for reporting in good faith.

13. Emergency Procedures

EMERGENCY QUICK REFERENCE

Call 911 immediately for life-threatening emergencies

Then contact your supervisor and provide:

- Your exact location (address, coordinates, or landmark)
- Nature of the emergency
- Number of injured persons
- Any known hazards at the scene

Do not move injured individuals unless necessary to prevent further harm.

14. Stop Work Authority

All Cloudpoint employees have the authority — and the responsibility — to stop work whenever any of the following conditions exist:

- Conditions have become unsafe

-
- Required PPE is unavailable or inadequate
 - Weather conditions create a hazard
 - Traffic conditions present an excessive risk
 - Any situation exists that could reasonably cause injury or property damage

No employee will be disciplined for exercising stop-work authority in good faith.

When in doubt — stop, assess, and contact your supervisor.
