

Cloudpoint Sales & Marketing Playbook,
Processes & Training Manual

The purpose of the Sales & Marketing Playbook is to provide assistance and training for new Cloudpoint sales and marketing team members. As a sales and marketing team member, you have a responsibility to carefully read and follow the guidelines within the handbook.

Cloudpoint is an agile and growing company with employees working in multiple locations. The benefits plan may not account for the individual variances required by state or local law. Where state and local law conflicts with any policy in this plan, the state or local law will take precedent. If you have any questions about the contents contained herein, please contact your supervisor.

Section 1: Company Information& Sales Organization

Company Mission, Values, and History

Organization Chart

Teams

Since we work for a variety of clients in a variety of industries and therefore the company is divided into Teams that are responsible for various sectors of industries. These four core Teams are responsible for meeting on a regular basis and developing performance measures and goals for Cloudpoint's growth in each of these markets. The idea is to provide team members the opportunity to use their skill sets and creativity to help the company grow and improve both internally and externally.

- Campus Facilities (CF)
- Infrastructure (IF)
- Local Government (LG)
- Public Safety (PS)

Other referenced company “Teams”: Sales, Leadership, Business Development (sales and marketing)

Team Leaders

Hosted Service Applications (HSAs)- [Current HSA's](#)

Hourly Rates- [Current Rates](#)

PandaDoc Catalog

The Catalog in PandaDoc is kept current with any standardized service/solution and its applicable price.

SignOps

Section 3: Roles, Responsibilities & Deal Capacity

Outside Sales

These team members find leads and gather information. They are outbound hunters, the masters of chasing down opportunities to feed into the pipeline. They focus on researching the leads to get contact info and to see if they are qualified. They do initial sales calls and emails to prospects to learn about needs and find out who the decision-maker is. They start the conversation, work with Team Leaders to overcome objections, prepare quotes and proposals, follow-up regularly, and win deals.

Sales Capacity

Deal Capacity

Sales capacity is highly dependent on the size of deals and the client type, however we find it difficult for sales leads to manage more than 25 active open deals at one time. If the number of deals exceeds this limit it creates difficulties in effectively following up with prospects in a timely manner.

Deal Size Limits

Lead Generation

The new business development process involves three main sources for lead generation to fill the sales pipeline.

- In-bound leads from the company web page or referrals
- Leads generated from marketing campaign activities (calls, emails, letters, etc.)
- Leads generated from events including conferences, showcases, webinars, or presentations

Section 4: Opportunity Stages

- 1. Prospecting**
- 2. Discovery**
- 3. Evaluating**
- 4. Closing**
- 5. Closed Won**
- 6. Closed Lost**

1. Prospecting

Purpose: To identify and nurture potential deals, even when they are highly uncertain or undeveloped.

1.1 Key Characteristics

- Represents very early sales activity—opportunities that are more potential than concrete.
- Sales team is educating stakeholders and planting the seed of a future solution.
- The aim is to educate prospects and ask them about their problems.

1.2 Lead Qualification Requirements

A Qualified Lead (QL) is a prospective customer who meets the necessary criteria outlined by the sales and marketing staff. There is a difference between a Lead and a Qualified Lead. A lead is anyone that expresses interest in our services, typically from an inbound channel such as a contact page or youtube channel. However a QL is someone who passes through our filter of meeting the necessary criteria. For example, if I'm trying to sell indoor mapping services to schools, I first have to identify leads that fit into the [Ideal Customer Profile \(ICP\)](#). For more specific info see the [ICP section](#) of this playbook. Let's say that I've identified from my ICP that the perfect customers are schools with more than 5,000 students and 5 or more buildings on their campus. I might have received an inquiry from a principal reaching out to us via the website and interested in our indoor mapping services, however, if he or she is in charge of a school with only 300 students and has only 2 buildings on their campus, he would not be considered a QL. However, I would still work with him or her to see if they meet other criteria and would be a good candidate for other services we offer, however I would not have reached out to them directly (outbound methods) since they did not meet my initial QL criteria.

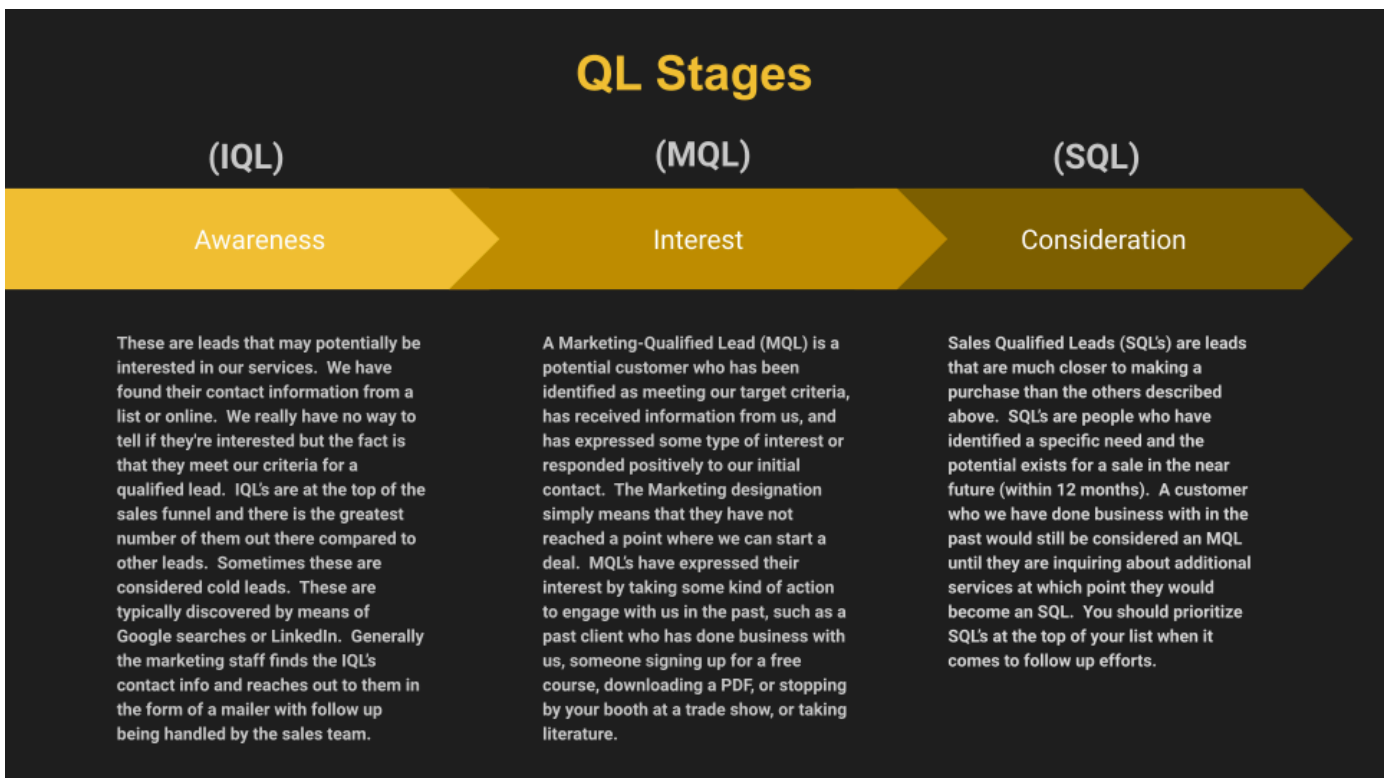

A **Qualified Lead (QL)** must pass through our filter by meeting the following criteria:

- **Industry/Demographic:** Meets predefined industry, location, and size criteria.
- **Identified Contact:** Contains a specific person with a name and title.
- **Authority:** The contact has the authority to make or influence decisions.

The goal of the marketing and sales team is to move QLs along within the sales process to help them become a customer success story. The QLs move through the sales process in stages, sometimes skipping the first stage altogether. These stages (buckets) are defined as follows:

1.3 Lead Qualification Stages (IQL to SQL)

- **Information Qualified Lead (IQL):** Awareness stage. These leads meet our criteria but have not yet engaged.
- **Marketing Qualified Lead (MQL):** Interest stage. The lead has expressed interest or responded positively to initial contact.
- **Sales Qualified Lead (SQL):** Consideration stage. Leads that have identified a specific need and have a potential for a sale within 12 months.

Information Qualified Lead (IQLs)- Awareness stage

These are leads that may potentially be interested in our services. The Lead Generation team finds their contact information from a list or online. We really have no way to tell if they're interested but the fact is that they meet our criteria for a qualified lead. IQLs are at the top of the sales funnel and there is the greatest number of them out there compared to other leads. Sometimes these are considered cold leads. These are typically discovered by means of Google searches or LinkedIn. Generally the lead generation team finds the IQLs contact info and reaches out to them in the form of a mailer with follow up being handled by the sales team. QLs are not considered IQLs until they have received some information from us. Once that happens, they are 'Aware' of our products or services.

These leads are in the awareness stage, a prospect is researching a problem they might have. At this stage, they are not necessarily looking for a solution to their problem. So the aim should be to educate them and ask them about their problems.

You can convert IQLs to the next lead stage by inviting them to a webinar or sending them case studies, offering them free consultations, etc. Many IQLs won't engage, and you don't need to worry them too much as you can always send them marketing email newsletters.

- Leads generated from online search
- Top of Funnel
- Varying qualification criteria are possible
- No response received yet

Marketing Qualified Lead (MQLs)- Interest stage

A Marketing-Qualified Lead (MQL) is a potential customer who has been identified as meeting our target criteria, has received information from us, and has expressed some type of interest or responded positively to our initial contact. Sometimes MQLs may be referred to as prospects. The Marketing designation simply means that they have expressed some type of interest or asked for some additional information. They have expressed their interest by taking some kind of action to engage with us, such as a past client who has done business with us, someone signing up for a free course, downloading a PDF, or stopping by our booth at a trade show, or taking literature. The following channels are sources where our MQLs come from:

- Positive response received
- Interest expressed
- Top to Middle of Funnel
- Some qualification criteria are met
- Past customers
- Content marketing
- SEO
- Paid Search
- Social
- Trade shows and events
- Customer referrals

Remember, not every lead that expresses interest is a Qualified Lead. They must meet the predefined criteria. For example, a student from Canada looking for an Esri solution to assist with their doctoral thesis is not a QL.

The interest stage means that they have a problem in mind and are looking for a solution to their problem. It's our job at this stage to convince them that our product or service could potentially solve their problem and get them to the next stage of asking for a meeting to discuss.

However, those who have shown interest in how you might solve their problem might reach out to you by giving more information about themselves like phone number, company information, and the exact problem they are facing.

Sales Qualified Lead (SQL)- Consideration stage

Sales Qualified Leads (SQLs) are leads that are much closer to making a purchase than the others described above. SQLs are people who have identified a specific need or problem and the potential exists for a sale in the near future (within 12 months). A customer who we have done business with in the past would still be considered an MQL but if they are inquiring about additional services at which point they would become an SQL. You should prioritize SQLs at the top of your list when it comes to follow up efforts. The last step in the lead qualification process is to move the SQL to a deal by identifying if they meet all the following criteria to become a potential customer and convert into a deal.

- **B-** Budget, **A-** Authority, **N-** Need, **T-** Timeline
- Middle to Lower part of funnel
- One step from starting a deal
- Most qualification criteria is met
- Predominantly two-way communication
- Receives personalized communication from sales team

1.4 Meaningful Conversations

Note: This section is a new addition to the Cloudpoint strategy to standardize activity logging in Pipedrive.

A meaningful conversation could come from a phone call, email correspondence, a discussion at a conference/event, or a door-to-door stop by where we have the opportunity to pitch our services, and we gain some type of market intelligence from an influencer or a decision-maker. The idea behind these activities is to convert a lead from the Awareness stage (IQL) to the Interest stage (MQL/SQL). An activity is only considered a "Meaningful Conversation" if it meets **all** of the following criteria:

- **Reaches a Qualified Target:** You are corresponding with the decision-maker or influencer, not a gatekeeper. Esri Account managers are also considered influencers so you may count meaningful conversations with them if you discuss a potential opportunity.
- **Delivers a Value Proposition:** You have successfully presented Cloudpoint's services or a specific resource, such as a whitepaper, webinar, or event.
- **Gains Intelligence:** You have uncovered specific organizational data (e.g., "Contract is up in 6 months" or "Currently restructuring", the structure of their GIS staffing) that helps build a future lead/conversion strategy.

See <https://cloudpoint.pipedrive.com/person/17853> for an example of a documented Meaningful Conversation and a LinkedIn follow-up invitation.

1.5 Lead Conversion Examples

- Jon found Moline's GIS Admin online and had never heard of him before so he called him after scoping some of their maps online. There was a 5-10 minute phone conversation and followed up with emailing contact info and he expressed an issue he's having with scripting & enterprise. Follow up ensued and a meeting with the Enterprise Team was set. This initial activity would be logged into Pipedrive as a phone call activity and if this was part of a campaign, would be named as such, and count as an IQL converted to a MQL since we moved him from Awareness to Interest. Unfortunately he did not respond to our Enterprise team's inquiry so he was left as an MQL for at least the remainder of the campaign, where the sales team would ideally follow up with him again prior to the campaign end date in an attempt to move him along to an SQL, start a deal, and provide scope and pricing.
- Adam Dorn reached out through our contacts page from Winnebago County WI with detailed information on their enterprise upgrade needs, he wanted to meet and learn what we could offer, and was reaching out to multiple companies for quotes. He would enter directly into the system as an SQL because he not only has interest, but has identified a specific need that we can help with, and is requesting pricing. In other words he says "I have budget, authority, need, and a timeline and am looking to move forward with a decision".
- Jon heard through the grapevine that Delbert (county engineer) at Kankakee County IL has a contract expiring with competitor Bruce Harris and Associates soon. The fact that they are a past client and I'm checking in with them automatically counts as an IQL regardless of a planned Campaign.

1.6 Exit Criteria

Before moving an opportunity out of Prospecting and into Discovery, you must answer these four questions:

1. **Is there an opportunity?** Does a real business problem exist?
2. **Can we win it?** Do we have a realistic chance given the competition?
3. **Is it worth winning?** Is the expected value worth the effort?
4. **Do we want to win it?** Is it a strategic fit for Cloudpoint?
5. Is a [Questionnaire](#) needed prior to a discovery meeting?

2. Discovery

Purpose:

To uncover, validate, and shape the customer's needs while positioning your solution.

2.1 Key Characteristics:

- Go beyond listening—actively influence the customer's understanding of their needs.
- Tailor your value proposition to shape potential RFP or decision-making frameworks.
- Gather detailed information: decision criteria, decision-makers, buying process, budget, timeline, and competitive context.
- Start building a deal strategy
- Determine whether or not Esri is involved or may become involved and what role they will play in the opportunity?
- Assess whether the opportunity Description concisely states the business need of the customer and reflects the vision/idea that we are selling.
- Determine whether the Customer Type on the opportunity reflects the end user.
- Explore what type of budget the customer has for this project.
- Review the contacts identified on the opportunity to see if a decision maker has been identified
- Determine if we are facing competition and what strengths / weaknesses are against the competitor's products or services.

2.2 Discovery Meetings

The Discovery Meeting (sometimes referred to as a discovery call) typically includes the sales representative and a team leader or technical specialist. There should ALWAYS be some knowledge of who the customer is (something about them) and what they are looking for prior to this meeting. Be sure to send a link to the appropriate Questionnaire prior to the discovery call if it applies.

This meeting is used to gain a better understanding of the customer's needs and learn as much as possible about how we can solve their problem and create wildly successful results. It should NEVER be a one-sided demonstration of our team doing all the talking and never listening. It should be focused on us asking questions as needed to learn the absolute most we can about the client. Have a presentation prepared and come ready to talk about the company and your team, however if you don't get the opportunity to present it, that's totally ok. Save it for later and you can always send that information in a SOQ of proposal later on.

The four most important things to identify during the discovery call are as follows:

1. **Cause-** Find the cause of why the customer is reaching out to us.
 - a. “What caused you to reach out to us?”
 - b. “What are some of the pain points that you are experiencing?”
2. **Outcome**
 - a. “What would you envision the perfect outcome looking like once this project is completed?”
 - b. “How would you be leveraging the software or service?”
3. **Obstacles**
 - a. Are there any major obstacles you foresee that could keep this project from happening?”
4. **Process-** Who is involved with making the purchase decision and what is the time frame
 - a. “What does your decision process look like and how long might that take?”
 - b. “Who else do you see being involved with this process moving forward?”

***The client’s IT representative must be present for discovery meetings involving enterprise work.**

**PowerPoint slide to include the Discovery meeting agenda. Give them the ability to select their meeting time from an appointment schedule.*

Other Discovery Meeting Guidelines

- The Account manager typically leads the discussion
- Have a list of nearby references ready if applicable. See [project portfolio](#)
- The [template Slideshow](#) template will serve as the agenda
- 45 minutes
- Do your homework completed prior
- 2-way conversation
- Goal is to understand their challenge and have enough info to provide a quote

2.3 Exit Criteria:

- Can now answer the 4 prospecting questions with greater certainty and confidence.
- Have a clear picture of what the customer needs and how you can deliver value.
- If still uncertain, continue discovery efforts or disqualify the opportunity.
- The client has completed a [Questionnaire](#), if applicable. The questionnaire is most helpful when used as a prerequisite for the discovery meeting.
- Discovery meeting has been completed

3. Evaluating (Proposing)

Purpose:

To present and defend your proposal while the customer actively considers your offer.

Esri Stage: Propose

3.1 Key Characteristics:

- Verify that the deal is in the right stage. Have we met with the client to determine their needs and business challenges? Have all activities from previous stages been met?
- Check to see if activities were created for the meetings, calls and presentations with the client. Are next steps identified in the activities?
- Validate the Esri products added to the deal match the solution that is being developed.
- Verify that notes about competition, if present, are added to the deal and our position against the competition if known.
- Determine if there are additional opportunity contacts (i.e. purchasing agents, CEO's, GIS techs) that might influence the sales engagement.
- The customer is seriously assessing your solution, pricing, and terms.
- Sales team continues active involvement—providing demos, presenting, and providing references as needed. Sales team should always offer to set up meetings with client references on the prospects behalf.
- Includes mutual communication and responsiveness from the customer.
- Verify that the quote/proposal includes appropriate components of complete services or solution
- Has legal been engaged if necessary?

3.2 Client Meetings:

Additional client meetings may be necessary during this phase if additional information of proposed solution is required or discovery questions need clarification in order to write a proper scope of work. Remember each opportunity to connect with the client will help build rapport and trust. We track client meetings very closely because they are used as a metric for company sales.

See the [Pipedrive features](#) under Tools & Resources section of this document for more information.

Proposal Meetings:

When delivering quote/proposal to a prospective customer, especially for large or complex projects, it is always recommended to present the quote or proposal in a meeting with the client rather than sending it via email. Consider delivering the proposal in person, when appropriate, for an additional personal touch.

Onsite Meetings:

Onsite meetings can prove to be extremely effective and valuable when done correctly and we want to encourage all team leaders and account managers to offer these meetings when appropriate. These meetings should be limited to large opportunities where the cost of travel can be justified in an attempt to win the deal. As a general rule of thumb, travel expenses for onsite meetings should not exceed 1.5% of the total opportunity value from that client over the next two years.

These meetings should be scheduled in advance and must include a qualified decision maker, influencer, or their Esri account manager. Often it works best to invite multiple stakeholders and even schedule different sessions based on specific stakeholders or departments that may be interested. When appropriate, we also include their Esri account manager to join in the presentation or discovery stage. Here is a [sample agenda](#) that can be used for scheduling onsite meetings with client stakeholders.

3.3 Exit Criteria:

- The customer has verbally agreed in principle to proceed with your offer.
- There is broad agreement on commercial terms (scope, price, deliverables).
- A mutually agreed-upon close plan exists, with clear actions and timing from both sides.

Why "Customer Evaluating" is preferred: Highlights the customer's active role and the ongoing dialogue, not just a document being "sent."

4. Closing (Negotiating)

Purpose:

To finalize the agreement and complete all final steps required to get the deal signed.

Esri Stage: Negotiate

4.1 Key Characteristics:

- Often involves legal review, procurement processes, internal approvals.
- Includes both commercial and operational coordination (e.g., implementation plans).
- Still requires active selling and sometimes strategic negotiation.
- Involves cross-functional effort from account execs, legal, finance, and delivery teams.

4.2 Exit Criteria:

- Signed contract or purchase order is obtained.
- Optional but recommended: fulfillment or handover plan is agreed upon (e.g., from sales to onboarding or support).
- Everything needed for internal booking or billing processes is completed.

4.3 Closing Guidelines

Why "Closing" is preferred: "Negotiation" implies price haggling; "Closing" better encompasses all the wrap-up activities that finalize a deal.

5. Closed Won

Purpose:

To indicate a completed and successful sale. See [209.2 Checklist for Closing a Won Deal](#)

Esri Stage: Close

5.1 Key Characteristics:

- Contract is signed and deal is confirmed.
- Internally, this often triggers post-sale processes such as implementation or account handover.
- At this point, revenue may be recognized and performance measured.

5.2 Closed Won Guidelines:

- Do not use additional opportunity stages to track fulfillment or delivery milestones—use separate fields or objects for that.
- Keep the opportunity stage focused solely on the sales lifecycle.

6. Closed Lost

Purpose:

To capture unsuccessful outcomes in a meaningful and trackable way.

6.1 Key Characteristics:

- The deal did not go through.
- Can include multiple loss reasons, such as:
 - Qualified Out: You decided not to pursue.
 - No Purchase: Customer chose not to buy from anyone.
 - Lost to Competitor: Customer bought from another vendor.
- Important for pipeline hygiene and sales analytics.

6.2 Closed Lost Guidelines:

- **Reasons**
 - Create structured sub-reasons for Closed Lost to gain insight into why deals are lost and improve future performance.
- **Qualified Out**
 - When an opportunity is 'Qualified Out' during a formal procurement cycle, the Sales Lead should send the standardized [No-Bid Letter](#) to the procuring agency to maintain a positive relationship for future opportunities.

Contract Execution / Documentation

All contracts must be signed and have attached scope before forwarding to ar@cloudpointgeo.com. We cannot just have a signature page or a PO without the scope. It must all be together.

Estimating Deal Probability

This section provides a standardized framework for the Cloudpoint sales team to estimate deal-closure probability in Pipedrive. By using consistent criteria, we ensure more accurate revenue forecasting and pipeline management.

1. Establish the Base Probability

The following table defines the base probability for a deal. To use this matrix, locate the intersection of the current Sales Stage and the Client Status Type.

Sales Stage	New Client (Cold/RFP)	New Client (Referral/Warm)	Past Client (1<3 yrs)	Existing Client (<1 yr)
Discovery	15%	25%	40%	60%
Presentation	25%	30%	50%	65%
Evaluating (Decision)	30%	40%	60%	70%
Closing (Negotiating)	50%	60%	80%	90%

Note: Client Status definitions follow Section 5 of the Cloudpoint Sales Playbook.

2. Modify the Base Probability (if applicable)

Adjust the base percentage above using the following specific deal criteria. These parameters are cumulative, meaning you adjust for deal size and additional adjust for competitive environment / contract status. The probability should never be higher than 95% or lower than 15% after applying modifications so adjust accordingly.

Deal Size & Complexity

- Small Deals (<\$20k): increase base by +15% (e.g., standard Kickstarts, small BOH).
- Large/Complex Projects (>\$100k): Decrease base by -15%.

Competitive Environment

- Sole Source: If Cloudpoint is the only vendor being considered, increase base by +15%
- Client is Shopping Pricing: Decrease base by -15%
- Competitive RFP/Bid: If we have had no previous contact with the Client, cap initial probability at 15% until short-listed. If we've had previous interaction with the Client, cap initial probability at 60% until short-listed.

Contract Status

- Contract Renewals: Should stay at 95% once the renewal evaluation period begins.
- Verbal approval: If verbal approval has been received and we are waiting on signatures, increase probability to 95% and move to the 'Closing' stage in Pipedrive.

Probability Guidelines

- Update the probability field whenever a deal moves to a new stage.
- For deals over \$25,000, ensure an Executive Sponsor is identified before moving past the Discovery stage.

Estimating Expected Close Date

This section provides guidance on estimating the expected close date. Historical analysis indicates an average sales cycle of 60-75 days for small deals and up to 180 days for larger or more complex opportunities. Use the following benchmarks for the Expected Close Date field:

1. Estimate Expected Close Date

The following table provides guidance for estimating the expected close date for a deal based on the deal category and historical context.

Deal Category	Recommended Forecast Window	Historical context
Managed Services Renewals	Current Contract Expiry Date	Highly predictable; 95% retention.
Under \$20k	60 - 75 Days from Creation	Includes BOH and Kickstarts.
Core Service (\$20k<\$100k)	90 - 120 Days from Creation	Involves multiple decision makers.

Deal Category	Recommended Forecast Window	Historical context
Large Deals (>\$100k)	120 - 180 Days from Creation	Involves multiple decision makers.
Competitive RFP/Bid	Published Award Date + 60 Days	Decision cycles average 60+ days.

2. Modify Expected Close Date (if applicable)

- Since new Clients often require additional steps for vendor registration, etc., extend the expected close date to the higher end for new clients and use the lower end for existing/past clients.
- Expected close dates should be modified accordingly as you learn additional information from the Client.

Section 5: Client Relations

Ongoing Client Relations

Once the deal has closed won, clients are transitioned to the Production Team via a Sales Handoff Meeting. These meetings are fluid and scheduled as needed since the Team Leader is generally knowledgeable of the deal already. During the project, the Operations Team will handle most customer correspondence but it's ok for sales reps to check in with customers as long as they are communicating with project managers prior to reaching out.

After 6 months of post-project inactivity, without another open deal, the client will be placed back into the IQL funnel for the Sales Team to pursue as a prospect.

New vs Existing Clients

Cloudpoint receives much of its work from past clients. When we use the term 'Client' here we are referring to the Organization and not the individual. It is important to differentiate between new, current, and past clients for the purpose of organizing our sales approach. The following definitions explain these terms:

New Client

- An organization or department that has either never done business with Cloudpoint before or has not had an active contract within the past 3 years.

Past Client

- An organization or department that has worked with Cloudpoint within the past 3 years but not within the past 12 months.

Dormant Client

- Any organization or department that has worked with Cloudpoint in the past 5 years but has not been contacted within the past 12 months.

Existing Client

- An organization or department that has an active contract with Cloudpoint or has had an active contract within the past 12 months.

Client / Project References

Client and project references are a key part of our success. We include these in every proposal that we send out. The marketing team maintains client / project references as templates within Pandadocs with oversight and technical content coming from team leaders and project managers. Account managers should always review language from project reference summaries within the proposal. At times, it may be necessary for them to work with the team leader or project manager to reword those project summaries to more closely align with the scope of work for that particular proposal.

In addition, account managers should always offer to set up meetings with appropriate client references on behalf of the prospect. Anytime we can take work off their plate and streamline the sales process, it will help build rapport and move the process forward. What's nice about the account manager offering to schedule those meetings is that it forces them to maintain contact with existing or past clients, making sure that those clients are still happy and providing raving reviews.

Letters of Recommendations

To ensure our proposals are as competitive as possible, we highly encourage sales teams to include client letters of recommendation. These are letters, found in Pandadoc or this [shared folder](#), are from clients on individual projects that emphasize our capabilities and how satisfied the customer was with the services that were provided. Oftentimes, when we request these letters for a specific project, our past clients are more than willing to assist us. Below is a sample of a request being made to a customer for a letter of recommendation:

Hi Vicki

I hope you're doing well! I wanted to reach out to thank you again for the past opportunities to work together. We've always valued collaborating with you and your team.

I'm excited to share that Cloudpoint has been selected as a finalist for a multi-year GIS contract with the Village of Glenview, IL. We're putting together our final presentation, and I was wondering if you'd be willing to write a quick letter of recommendation for us? Your testimonial would carry a lot of weight.

*If you're able to help, we'd need the letter by **Wednesday, April 1**.*

No pressure at all, but we'd certainly appreciate the support. I'm attaching a [sample](#) for your convenience. Let me know what you think!

Best Regards,

Jon

Section 6: Ideal Customer Profiles & Sales Metrics

Ideal Customer Profiles (ICP's)

Customer Profiles are refined through various means: Team meetings, won/lost deals, new grant/funding opportunities, GIS adoption in a new industry or geographic area, etc. The current profiles identify the target audiences for our Campaigns

Local Government (LG)

Population	Primary Target	Secondary Target	Recommendations
5,000 - 25,000	City/Village Administrator or Dir. of Municipal Services	Public Works / Utilities Superintendent	Target high-level administrators with the message of "continuity"—Managed Services ensures institutional knowledge doesn't disappear when a key employee retires or leaves.
25,000 - 50,000	Planning Director or City Engineer	IT Manager / Director	While Engineers/Planners need the data for daily operations, IT is increasingly the gatekeeper for security and hosting standards. Win over the Engineer on utility and IT on technical reliability.
50,000 - 100,000+	IT Director or CIO / Dir. of Innovation	GIS Division Manager or Public Works Director	These cities often have internal GIS staff who are overwhelmed. Pitch Managed Services as "Advanced Technical Support" (e.g., Enterprise upgrades, Configurable Apps, Dashboards) that their internal IT team doesn't have the bandwidth to manage.

Municipality Status	Primary Contact	Sales Angle	Partnering Opportunity
Outsourced IT	City Manager	"Complete the Digital Office"	Contact the MSP: Offer to be their "GIS Department" for their existing municipal clients.

In-House IT (Small)	Public Works / Utilities Superintendent	"GIS Continuity"	Assist IT: Show the IT Manager how you take the GIS workload off their plate.
In-House IT (Large)	CIO / Dir. Innovation	"Enterprise Staff Augmentation"	Support IT: Pitch specialized high-level projects (Hub, AI, Dashboards) that their team lacks the bandwidth for.

Counties:

- Any county regardless of population.
- With or without GIS data, staff, software, etc.
- With ArcGIS Enterprise is better, but we can do new deployments
- Primary Targets: GIS Department
- Secondary Targets: IT, Metropolitan Planning Organizations (MPOs), Regional Planning Commissions (RPCs), GIS Consortiums

For now, remaining teams profiles and plans can be found through the following links:

Public Safety ([PS](#))

Campus Facilities ([CF](#))

Infrastructure ([IF](#))

Customer Acquisition Cost (CAC)

- $CAC = \text{Total Sales and Marketing Costs} / \text{Number of New Customers Acquired}$
- We like to measure this on a Quarterly basis

Customer Lifetime Value (LTV)

- $LTV = \text{Average Revenue per Client per Year} \times \text{Gross Margin} \times \text{Average Client Lifespan (years)}$

LTV : CAC ratio

- You'll often compare LTV : CAC ratio.
- Healthy benchmark: 3:1 (LTV should be ~3x CAC).
- If it's lower, acquisition costs are too high or retention is too short.

- If it's much higher (say 8:1), you might be under-investing in marketing and sales.

Section 7: Campaigns

Overview

Campaigns are the overarching method of generating and tracking deals and thereby sales. They are numbered and tracked in our Scorecard, Pipedrive, and Avaza to help simplify our Marketing processes and start to develop a true sense of return on our efforts.

Ultimately, the goal of any campaign is to win contracts for work. However, there are other "wins" associated with Campaigns: securing meetings (virtual or in-person) to discuss services and generating quotes and proposals directly from Campaign efforts are both goals.

Yearly campaign plans are reviewed and set during the Q4 Team planning meetings for the upcoming year. Additionally, all ongoing and planned Campaigns are continuously reviewed at Sales and Marketing, and Team meetings.

Campaign plans may come from a combination of known, scheduled grant cycles, specific industry purchasing windows, technology changes or advancements, conferences, previous successful campaigns, and on. Always be on the lookout for a new method, funding opportunity, or client type that may fit into the scope and timeframe of a Campaign.

Components

- Target Audience
- A Message
- Method- A communications plan
- Timeframe
- Tracking- A way to measure success

Requirements

- Naming Campaigns:
 - Naming convention for Campaigns will be "YYYY.##-Title of Campaign" (No spaces in-between the dash. Title will come from Team Leader and be succinct but recognizable. Ex: 2024.10-Esri UC).
 - See the [Campaign spreadsheet](#) to get the latest sequential Campaign ID number
 - For teams that are split by regions, the campaign name should include the region designation, ie. LG [East/West]_[Description]
- Focused campaign efforts will create a list of IQLs to go into pipedrive where marketing and sales are attempting to move them to MQL then SQLs.
- Campaigns have a time limit that the person will lose the IQL tag after the designated time period but the contact will stay in pipedrive so we can maintain the history
- When IQLs are imported as part of a campaign, then a task gets set to remove the IQL tag if they have never responded within the given time period

Types of Campaigns

- **Conferences / Events**
- **Stop-bys/Door-to-Door**
- **Calls**
- **Emails**
- **Direct Mail**
 - Letters
 - Postcards
- **LinkedIn**

Process

[SOP: Creating Campaigns](#)

The general Campaign process should include the following steps:

- Create/Establish a list of contacts
 - Pipedrive should always be our de facto marketing list creator. However, if a brand new audience is being marketed to, meet with Marketing to advise on when to add the contacts to Pipedrive so as not to bog down the amount of contacts in our database.
 - Follow requirements for exporting contact lists from Pipedrive
 - [Required Pipedrive Fields for Campaign Marketing Lists](#)
- Create campaign plan with follow up schedule
 - Decide and record Start and End dates for the Campaign
 - The [Campaign Template Card in Trello](#) has tips and best practices.
- Import the list to Pipedrive and create activities as needed for each person
 - Work with Marketing and the checklists in the Trello cards to assure proper activities, labeling, etc. is recorded in Pipedrive
- Execute the Campaign, creating and completing activities in Pipedrive as planned.
- Close the Campaign

[SOP: Closing Campaigns](#)

- This process helps clear up the Campaign tracking in its various spots. This does not mean a deal may not still be attributed to a “closed” Campaign.
- In general, Deals may be attributed to a Campaign for up to 2 years.

Pipedrive Requirements

- An activity will be created when a campaign starts that has the Campaign ID in the title of the activity

- Activities can be filtered by campaign using the Campaign ID so marketing and sales know where to focus their efforts

Conferences and Organizational Involvement

Involvement in organizations that align with the clients and industries we currently serve are one of the most effective ways to meet and interact with a large volume of people and promote our company. Additionally, the networking, knowledge sharing, and strengthening of current client relationships is invaluable.

Plans for involvement, exhibiting, and therefore budgeting for any conference or organizational meeting will be planned and tracked as a Campaign. Just like all Campaigns conferences are reviewed and set during the Q4 Team planning meetings for the upcoming year. Additionally, all ongoing and planned Campaigns are continuously reviewed at Sales and Marketing, and Team meetings.

See [Event Evaluation Schedule](#) for more information on conferences which Cloudpoint plans to exhibit at.

Request for Proposal, et. al. - RFPs and Bids Board

Due to the sometimes complicated nature of formal procurement processes, sometimes additional Cloudpoint employees outside of the Sales Team are needed for the response process. To this end, outside of deals in Pipedrive, formal requests are also tracked on the RFP and Bids Trello Board.

Generally, official public procurement requests are researched and vetted by the Marketing Team, however a formal request may be obtained through any employee and given to Sales for evaluation.

Many requests are necessary to be completed because of that organization's procurement process they are bound to follow, even with long-term current clients. As much as needed, the Client Relations Team should work with the Sales Team to keep up to date with any formal requests from current or recent clients. As much as possible these requests should be known ahead of time, planned for, and sent directly to us.

[SOP: RFP/Q/I Search and Evaluation Process](#)

[SOP: RFP/Q/I Evaluation and Response Process](#)

No-Bid Letters

If an RFP is vetted and evaluated as a strategic misfit according to our *SOP: RFP/Q/I Search and Evaluation Process*, utilize the approved [No-Bid Letter](#) to formally notify the client.

Procurement Portals

See State Procurement portals page within the [State Portals & Registrations Sheet](#) when looking to bid on projects requiring state registration or procurement portals.

Proposal and Quotes

Quotes are used for standard offerings and smaller projects, often less than \$20k. Examples: Block of Hours, Kickstarts, SignOps and barcodes, etc.

Proposals are reserved for larger projects, and if we are very unknown to the Client and need to send additional information. These can consist of any combination of project scopes, schedules, resumes, client references, pricing, etc.. Examples: Managed Professional Services, Utility Network migration, Responses to RFPs, etc. In some cases, Blocks of Hours may be sent as a proposal if it's a new client and we need to provide them with qualifications and resumes.

This distinction will be decided by the Sales and Team Leaders as they correspond with the Client.

Quotes Process

PDF File naming should follow the naming convention outlined on the COM site:

Sample Quotes

- [Block of Hours](#)
- [ArcGIS Enterprise Upgrade](#)
- [ArcGIS Server Upgrade](#)
- [Enterprise GIS Audit](#)
- [NG9-1-1 Managed Services*](#)
- [Indoor Mapping \(Data Collection\)*](#)

*grant funded

Proposal Process

PDF File naming should be as follows:

- YYYYMMDD+"_"+Document Title(this is automatically generated from the name of the Deal in Pipedrive)+Proposal
- Example: 20220307_Tazewell County IL Managed GIS Services Proposal

Sample Proposals

- [ArcGIS Online /Pro Kickstart](#)
- [ArcGIS Indoors Implementation with Data Collection](#)

- [Managed Services](#)
- [Managed Services Renewal](#)
- [Enterprise Managed Services](#)

[Proposal and Quotes Tips, Walkthroughs, and Best Practices](#)

Section 8: Business / Strategic Partnerships

Although Esri is the only official partnership Cloudpoint currently engages with, several unofficial business partnerships have proven fruitful in our past work. We are always open to suggestions for using existing and new business relationships to increase inbound leads and sales.

A list of current and past Cloudpoint business partners is available [here](#).

Esri Alignment

Partnership

Cloudpoint currently engages with Esri as a Gold Level Business Partner. While ultimately Esri can perform all of the same services that we offer, they prefer to recommend business partners to their clients. However, Esri must walk a fine line of “favoritism” between business partners, especially partners in the same vicinity as one another.

To this end, we encourage a healthy relationship with the Esri Account Managers and Solutions Engineers, engaging in recurring check-in meetings, typically monthly or quarterly, depending on activity, within the sales rep’s focused territory. The Business Development Manager can help to establish a plan for regular communication, meetings, etc., with these Esri representatives.

As part of the Esri Partner Network (EPN), Cloudpoint specializes in the following offerings to expand core specializations:

- State and Local Government
- Network Management (Utility Network)
- Indoor GIS (ArcGIS Indoors)

Esri Software

ArcGIS Pro

[ArcGIS Online](#)

ArcGIS Enterprise

Contacts

Currently known Esri contacts and their roles and responsibilities.

Use of Information

As a business partner, we are allowed full use of Esri logos, articles, blogs, etc. for marketing purposes, however there are guidelines we must follow:

- [Esri Brand and Mark Guidelines](#)
- [Esri Product Naming Guide](#)
- [Esri Logos and Symbology](#)

Section 9: Sales Tips, Tricks, & Best Practices

Best Practices

General Advice

- Trust- Selling professional services is largely about building trust-based relationships with potential clients, and you can't rush that.
- Persistence-The sale is often made after the fifth, seventh or even 12th attempt. If you give up after two or three calls, you're simply giving buyers away to the competition.
- Specialize- Don't try to be all things to all people. Specialize and focus in the areas you add the most value. Buyers love specialization because they equate it with expertise
 - Sales tip 1: Package your services like a product.
 - Sales tip 2: Position yourself as an expert.
 - Sales tip 3: Establish sales & service processes.
 - Sales tip 4: Provide great services that market themselves.

Stop-by's

- Do not chew gum when making stops and introductions.
- Make sure to minimize distractions throughout the day so you are able to optimize your time and make as many stops as possible.
- Sometimes you may have to look for the entrance and have to spend some time investigating where to find the person. Don't hesitate to knock on doors or open doors to do a little casual investigating to find out where there is someone to talk to. Sometimes you may need to ring a call button or something to get to speak with a person.
- When greeting people for the first time be sure to smile and have a pleasant attitude and demeanor.
- Introduce yourself by name and the company and tell them why you are there, who you are looking for, and ask if they are available. Sometimes that person is not at that location, in which case you will need to get the address of the location to stop there later. Always thank the gatekeeper and be sure to **get his or her first name every time** because you can use that in a follow-up email to your contact.
- If the person is not available, ask for their contact information or business card and if it's OK to leave them with your materials to pass along to them. Always, always, always make sure you **do not leave without a business card** or their contact info written down. Also, write down the first name of the gatekeeper on the back of the business card to remember it later.
- Often the person that you are looking for may be housed at a separate facility or separate location in which you should always ask for that location and go to that place to leave your information.
- If the person is available make sure you are brief and don't take a lot of their time unless they are genuinely interested. Always be ready to provide your brief pitch in case you run into the decision maker unexpectedly. Regardless of the outcome of the conversation, **be sure to ask them for any referrals of others in their area who may be interested in your services.**

- Following up is the most important part of the whole operation. We can make dozens of stops and have quality conversations, however, if we are not following up, we are not going to make any sales.

Email

- General guidelines for follow-up emails:
 - Briefly explain the problems that your solution or technology can solve for them.
 - Confirm that they are the correct contact at the organization to be talking to about this matter.
 - Request time to meet to hear their needs, and introduce our company and services.
- Five email follow-up mistakes to avoid:
 - Not following up quickly. Many thought leaders believe that you should follow up on leads five minutes after they send an inquiry through. But this is unrealistic, as you're not sitting by the phone all day, and you may be serving an international audience. However, it's important to follow up quickly. The longer you leave them, the less chance you'll get a response. Put systems in place to ensure you're responding as quickly as possible.
 - Not focusing on the company. Many sales professionals make the mistake of putting all their energy into the prospect. If you're selling into large organizations, you need to be engaging with multiple people. Always find out as much information about other stakeholders and the buying process in order to accommodate all decision makers.
 - Not following up often enough. A study by Velocify found that 93% of converted leads are reached by the sixth attempt. Make sure that you're following up enough when the relationship has begun. You'll learn how to do this by adding value later in this guide.
 - Not using preferred channels. Anecdotally, 90% of the time prospects will want to hear from sales reps by email. But some may prefer a phone call or other form of communication. If they'd prefer a phone call over email, ask them what time is best to reach them.
 - Not tracking your metrics. Without measuring your sales performance, you won't know if what you're doing is working. Use a CRM to measure the open and response rates of each of your emails to see how each follow-up email performs.

LinkedIn

Examples of Personalized LinkedIn Messages

1. The Content Appreciation Connection (Post Engagement)
 - a. When to Use: Someone wrote a great article, post, or comment you found insightful.
 - b. Example: "Hi [Name], I really appreciated your recent post on AI ethics in healthcare. Your point about 'data anonymization challenges' especially resonated with me. I've seen similar issues in my work at [Your Company]. Would love to connect and follow your future insights!"

2. The Event Follow-Up
 - a. When to Use: You met someone at a conference, webinar, or virtual event.
 - b. Example: "Hi [Name], It was great hearing your perspective on supply chain optimization at the [Event Name] last week. Your tip about using predictive analytics was spot on. I'm keen to connect with fellow professionals in this space. Hope to stay in touch!".
3. The Shared Interest/Mutual Connection
 - a. When to Use: You have a common industry, alma mater, or connection.
 - b. Example: "Hi [Name], I noticed we both worked at [Mutual Company/University] and share an interest in sustainable tech. I saw your recent work on [Project/Topic] and was impressed. Would love to connect and exchange ideas.".
4. The "I'm Hiring" Approach (For Recruiters/Hiring Managers)
 - a. When to Use: You're looking for specific talent and see relevant skills.
 - b. Example: "Hi [Name], I'm impressed by your experience with React Native at [Their Company]. We're expanding our mobile team at [Your Company] and looking for someone with your skillset. Would you be open to a quick, no-pressure chat about the role?".
5. The Value-Add Offer
 - a. When to Use: You have a relevant resource that solves a problem they face.
 - b. Example: "Hi [Name], I noticed you're hiring for GTM roles at your Series A startup. We recently developed a Notion tracker for early-stage hiring that's helped similar companies. Happy to share if it would be helpful for your team.".
6. Key Principles for Success
 - a. Be Specific: Mention concrete details from their profile, posts, or comments.
 - b. Offer Value First: Show how you can help or what you've learned from them.
 - c. Keep it Concise: Aim for 50-100 words; respect their time.
 - d. Clear Intent: Make your purpose (connection, insight, opportunity) clear.

Section 10: Performance Requirements for Sales Reps

Company and Team Sales Goals

Company and Team Sales Goals are established by the leadership team by reviewing past sales performance, current staffing and project needs, and reviewing information provided by the Sales Manager and the Team Leaders. Below are some high-level expectations for sales reps but more details can be found on the individual's KRA and in case of discrepancies, the KRA will supersede this information.

Individual Sales KPI's

Individual sales KPI's are set by the VP of sales working with the individual sales representatives. These KPI's may change on a yearly or quarterly basis, depending on several factors, including but not limited to:

- The team member's longevity with the company
- Past sales performance with the company
- Amount of sales experience
- The team or type of client they are selling to
- Territory or region and Cloudpoint's past exposure in that area

Responsibilities and Duties

- Present and promote the company's professional services to prospective customers
- Cultivate new customer leads from a list of prospects and convert leads into opportunities and wins
- Establish, develop, and maintain customer relationships through professional networking
- Reach out to customer leads through phone calls and emails
- Achieve agreed-upon sales targets and outcomes within given timelines
- Present solutions, quotes, and proposals to potential customers with assistance from other technical staff
- Analyze the market's potential, track sales, and status reports
- Keep abreast of best practices and promotional trends within the designated market sector

**For more detailed information on individual responsibilities, see refer to your KRA*

Availability

- Availability and out-of-office requirements will be in accordance with the employee handbook

Section 11: Tools & Resources

Sales Process Diagram / Flow Chart

SOP's

Trello 200_SMA_SOP's

**Be sure to copy the trello SOP card to a different board if you plan to check the boxes*

90-Day Outreach

Cloudpoint has a standard 90-day semi-automated workflow for reaching out to new prospects on a campaign list. The workflow consists of the following steps, which can be triggered via the [90-Day outreach activity](#) in Pipedrive. This workflow may be adjusted depending on the target audience and campaign message.

1. Call #1 (Day 1)
2. Email #1 (Day 1)
3. Email #2 (Day 7)
4. LinkedIn Connection (Day 10)
5. Call #2 (Day 21)
6. Email #3 (Day 21)
7. Email #4 (Day 35)
8. Call #3 (Day 60)
9. Email #5 (Day 60)
10. Email #6 (Day 90)

Pipedrive

Purpose of Pipedrive

"Customer relationship management is your company's strategy of maintaining engagement with your clients and potential clients." - <https://www.pipedrive.com/en/blog/what-is-crm>

Pipedrive is Cloudpoint's Customer Relationship Management (CRM) SaaS. The Cloudpoint Sales and Marketing Teams use Pipedrive every day in a variety of ways:

- Tracking communications with, and details about, current and potential clients.
- Tracking the progression, communications, details, and activities of deals.

- Scheduling and executing activities related to marketing campaigns.
- Tracking and forecasting revenue.

Pipedrive is also the main method of evaluating a Sales Team members' overall performance. Training, evaluating, and goal setting of Sales metrics will be ongoing. To this end, the following requirements must be adhered to, unless otherwise approved.

Pipedrive Settings

The following settings are required for Pipedrive Sales staff:

- Synced GMail and GCal
 - GCal maybe me 1 or 2 way synced, see BDM for advice

Data Input Requirements

Deal Required Fields:

- Teams
 - Every deal is assigned to one of [Cloudpoint's teams](#), depending on the type of client organization
 - Local Government
 - Infrastructure / Utilities
 - Campus Facilities
 - Public Safety
- Project Type
- Project Category

Project Category	Description
GIS Consultation	<i>GIS Implementations, Data Maintenance, Managed Services (non-Enterprise), Office-to-Field Kickstarts, Dashboards, Configurable Solutions, Map & App Configs, Parcel Fabric, Training</i>
Enterprise GIS	<i>Enterprise Audits, Kickstarts, Deployment Migrations, Cloud Hosting, Managed Enterprise GIS Services</i>
Data Collection / Cleanup	<i>Data Collection, Manual Cleanup, Digitizing, Data Editing, Cemeteries, Layer Creation</i>
Data Migration & Automation	<i>Data Loading, Data Interoperability, Python Scripting, Systems Integration, SignOps Imports, Utility Network Migrations, Workflow Automation & Scripting</i>
Custom or Advanced Support	<i>Advanced consulting requiring highly experienced staff (SME's), Custom Application Development, Projects or clients requiring special expertise dealing with complex or unique circumstances</i>

- Project Sponsor
 - This is the main contact for the deal. Always listed as the contact person in pipedrive. Every deal will have a project sponsor.
- Executive Sponsor
 - An executive sponsor is required for all deals over \$25,000. This is the person who is “above the line” of the project sponsor and would be the default contact person if the project sponsor leaves the organization. Oftentimes, a higher-level decision maker or business group leader. They must always be attached to the deal in pipedrive as an additional participant.

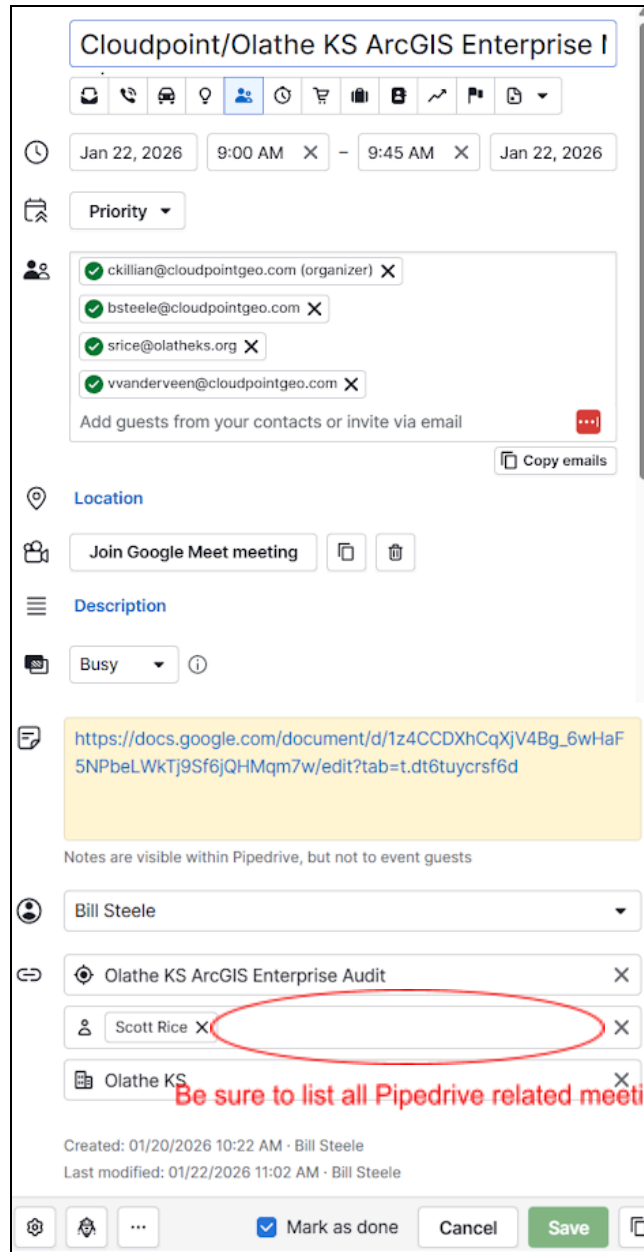

Pipedrive Activities

The following section provides a brief summary of the various activities that we track in Pipedrive. The **due date** is key for tracking when the activities have been completed. At a minimum, every activity must include the assigned user, the deal or lead (if applicable), the contact person, and the organization.

1. **Sent Email**
 - a. **Log emails sent to the prospect (optional if pipedrive email tracking is on)**
2. **Phone call**
 - a. Log all phone conversations with the prospect
3. **Stop-by**
 - a. Used for tracking stop-by's with any interactions captured in the notes section. We log all stop-by's where we talked to someone or left information.
4. **Meaningful conversation**
 - a. see [Section 1.4](#)
5. **Client meetings**
 - a. Used for tracking all scheduled meetings with prospects or clients. see [Section 3.2](#) for additional details. Meeting notes must be entered or linked, and the contact person must be populated in the “People” section of the activity so it tracks correctly in our system. **IF YOU DON'T DO THIS PROPERLY, IT DOES GET RECORDED AS A CLIENT MEETING**

IN OUR COMPANY METRICS. Below is a snapshot of what the proper documentation should look like for this activity:

Cloudpoint/Olathe KS ArcGIS Enterprise I

9. Thank you note

10. LinkedIn connection**11. Final Attempt to reach prospect****12. Mailing (postcard or letter)****13. IQL****14. MQL****15. SQL****16. 90-Day Outreach**

- a. This activity triggers an automation once the user changes the subject line. The automation follows the company's standard workflow for 90-Day outreach, adding a series of 10 scheduled activities over the next 90-days to help sales leads stay organized with their follow-up. The automated activities include template scripts in the notes section for both emails and calls.

Importing Data to Pipedrive

An important thing to note when performing mass updates to Pipedrive data. Pipedrive actions sometimes trigger Zapier automations. So if you are importing data to Pipedrive to update existing deals, orgs, or people, for example, you'll want to first check and see if there are any Zaps connected that will be affected by your import process prior to proceeding . For example if you are updating The Project Category for all past deals, or even removing or updating drop-down menus for custom fields, any updates you make will affect all of those deals triggering Zaps for All of those deals in associated fields . This may very well cause you to hit your Daily API token usage In Pipedrive.

For importing data, see Pipedrive [sample data spreadsheet template](#) to import data into Pipedrive

Integrations

Pipedrive integrates with almost every other platform we use throughout the company:

- Trello
 - Pipedrive Power-Up: Enable this power up on any board to be able to link Pipedrive Persons, Orgs, and Deals to a card.
 - Open Deals Board: This board is for all employees without a Pipedrive user account. All current open deals can be found on this board under their respective Teams. This board is fully automated; cards are created and moved to Won or Lost when marked as such. The member attached to each card is the "Deal Owner" and "Sales Lead" for that specific deal. This is who any employee should start with if there are any questions regarding the deal.

The "Pipedrive Deal specific BCC email:" is the email address that should be BCC'd when an employee does not have Pipedrive access and needs to communicate with the client regarding the deal..

- Mailchimp
- PandaDoc
- Zapier
- Google

Training Requirements

Pipedrive Academy- <https://learn.pipedrive.com/app/catalog>

See BDM for required and recommended courses.

Resources, Tips, and Best Practices

- My Deal Activities Filter- <https://cloudpoint.pipedrive.com/activities/list/filter/200>

PandaDoc

PandaDoc is Cloudpoint's Sales document creation platform. PandaDoc's unique features allow for quicker document creation and collaboration among multiple Team members.

Specific training and advice on PandaDoc, its content, functioning, and its workflows will be conducted by the Business Development Manager.

Tutorials

Trello

Trello is an app used to organize projects and other aspects of Cloudpoint Geospatial business. Trello is structured with Boards, Lists, and Cards. Trello has numerous integrations, automations, and connections across all platforms within Cloudpoint.

Specific training and advice on Trello boards and workflows to increase efficiency pertaining to the Sales Team will be conducted by the Business Development Manager.

Shared Drive

The Google Shared Drive is the central store of all of Cloudpoint's business data. Additionally, each employee is provided with their own Drive for private information.

Access to individual company Shared Drives is granted on an as needed basis. If you believe there is access needed that has not been granted please contact the Business Development Manager for review.

An overview of the contents of, and training on searching and interacting with the Drives will be provided by the Marketing Team.

Slack

Slack is Cloudpoint's internal direct messaging system. It should be used for quick, short-term, communication. It should be seen as akin to having a quick conversation at someone's desk. Under our current plan messages are not kept for more than about 2-3 months. If you need a more permanent record of your communication, please use email.

Sales Team members will be added to the appropriate channels as determined by the Business Development Manager.

It is expected that Sales Team member Slack status' will be set and kept up-to-date as much as possible during designated working hours.

Google Calendar

The Business Development Manager will provide training and guidance:

- Syncing calendar to Pipedrive
- Subscribing to other employees calendars
- Keeping the Working Location updated
- Keeping the overall calendar and scheduled meetings as up-to-date as possible

Sales Strategy Guide

We have a Cloudpoint [Sales Guide](#) that summarizes our approach to the sales process, including core talking points, a step-by-step sales pitch focused on delivering measurable results, and practical templates for outreach, including overcoming common client objections. The guide was created using Canva and can be updated [here](#).

AGO Demo Site

We have a demo site that shows a variety of maps and apps that lives on our AGO account.

Questionnaires

Cloudpoint frequently uses questionnaires to assist with the discovery process. We send these to the clients, when applicable, prior to discovery meetings, to gain valuable insights about the client's needs, improving our ability to facilitate the conversation and develop an accurate scope for the project. When sending these to the client, be sure to tell them to just fill it out the best they can. The authoritative links to questionnaires can also be found under the Sales folder within the Cloudpoint bookmarks in Chrome. Client responses to the questionnaires can be found under the appropriate Trello boards.

[ArcGIS Enterprise Questionnaire](#)

This is the questionnaire that is sent to clients prior to a discovery call when we know that the client is interested in an ArcGIS Enterprise deployment, upgrade, managed services, or other Enterprise-related support.

[Campus Facilities indoor GIS Questionnaire](#)

This is the questionnaire that is sent to clients prior to a discovery call when the client is interested in Indoor / Campus GIS. Information provided in this survey enables us to streamline the process of defining suitable and effective solutions for the client's indoor mapping or related campus GIS needs.

[Facility Technology Modernization \(FTM\)](#)

[Utility Network Readiness Survey](#)

This survey helps evaluate an organization's readiness to migrate to Esri's Utility Network. The responses will assist Cloudpoint in tailoring recommendations, scoping, and support options specific to your system and operational needs.

[Project Portfolio](#)

The project portfolio is a collection of all past projects on a map to help sales reps find the nearest clients to a specific project area. Often times prospective clients want to know who else we've worked with in their area and this resource is an excellent tool to determine who we've worked with and what kind of projects in that area. The link to the project portfolio can be found under the Sales folder within the Cloudpoint bookmarks in Chrome.

[Managed GIS Services Offerings and Client List](#)

This is a list that shows all of our current managed services clients and can be helpful for pricing managed services offerings.

[Scorecard](#)

The sales scorecard is used to monitor our sales progress on a weekly basis. It helps us track deals started, deals won, and a variety of other sales metrics.

[Event Schedule](#)

This schedule shows all marketing events, conferences, and trade shows for the year.

[Videos](#)

These are links to video tutorials that are applicable to our CRM and proposal software systems.

[Pipedrive Videos](#)

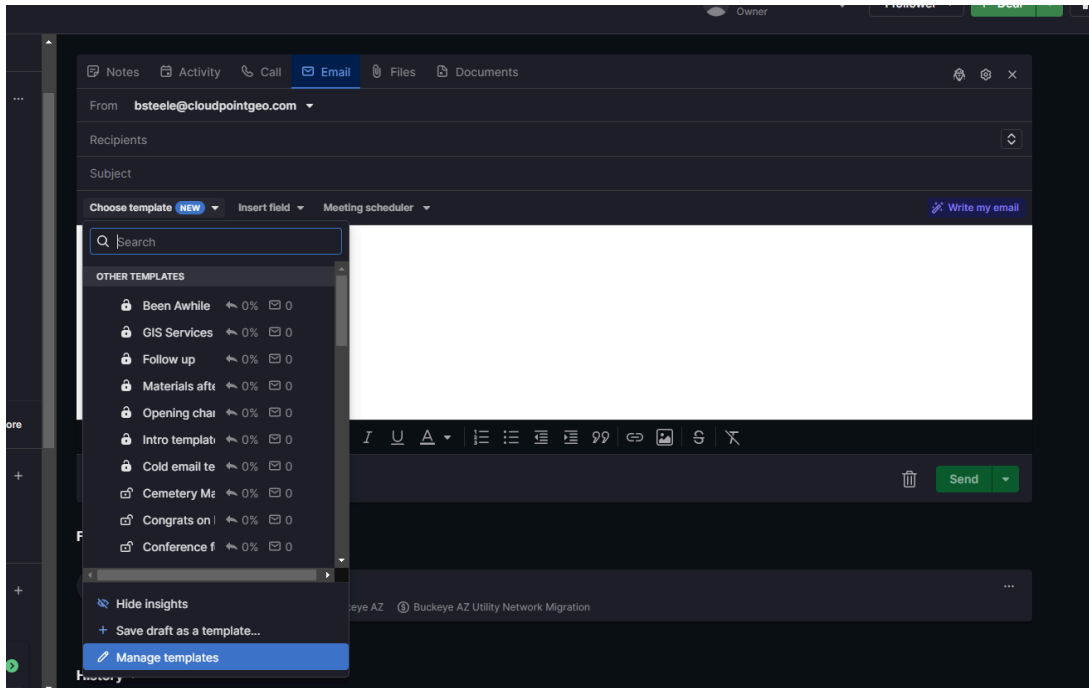

[PandaDoc Videos](#)

[Scripting](#)

Examples of call and email scripting can be found in the attached folder.

Campaign/message specific Email and Phone script examples can be found in various [Campaign](#) Folders.

Additionally, generic and internally created email templates have been saved and shared in Pipedrive. You can access them whenever you start to write an email in Pipedrive. You may also save your own private

email templates for use.

Section 13: Glossary

Open Deal: Discussions with a client regarding work we may perform for them, which they have replied with neither "yes" or "no" yet.

Won Deal: A client agrees upon the scope and price of work proposed and sends a signed contract. A signed contract from a client moves a deal from Open to Won.

Lost Deal: A client declines the work proposed (for various reasons), or the Sales Lead determines the deal should no longer be pursued.

Person: Pretty self-explanatory. Sometimes referred to as a client, contact, human, dude, ma'am, they, sir, bruh, etc. etc. etc.

Org.: Specifically, the group that employs the "Person" in Pipedrive, and will generally ultimately be paying the bills.

Activity: A scheduled task for the Business Development Team to manage and track. These include emails, calls, letters, sending thank you cards, etc.

Pipeline: Sometimes referred to as a "funnel." The pipeline contains the entirety of deals in Pipedrive. Generally segmented into stages, it helps with forecasting and deal management.

Deal Stage: The general step that a deal falls into during its progression from start to end, Won or Lost).
